x

Global Energy and Management, LLC, a limited liability com-
pany of Connecticut ("plaintiff" or "Global Energy"), with its
principal place of business at 130 Captains Drive, Westbrook,
Connecticut, complains as follows:

JURISDICTIONAL STATEMENT

1. Global Energy is a limited liability company of Connecticut whose principal place of business is located in Connecticut.
2. All members of Global Energy are citizens of Connecticut.
3. Xethanol Corporation is a Delaware corporation whose principal place of business is in New York.
4. Upon information and belief, none of the individual de-

endants is a Connecticut citizen.

5. The amount in controversy exceeds \$75,000, exclusive of interest and costs.

6. Upon information and belief, defendant Christopher D'Arnaud-Taylor was an officer of Xethanol at all times relevant to this action.

7. Upon information and belief, defendant Jeffery Langberg was a director of Xethanol at certain times relevant to this action and an advisor to the board of directors at other times relevant to this action.

8. Upon information and belief, defendant Lawrence S. Bellone was a director and the chief financial officer of Xethanol at all times relevant to this action.

9. Upon information and belief, defendants Louis Bernstein, David Ames, Thomas J. Endres, Robert Buller, David Kreitzer and John Murphy were either directors, officers or employees of Xethanol at all times relevant to this action.

10. Defendants represented to Lee Tyrol, the manager of Global Energy, and other representatives of Global Energy that Xethanol could manufacture cellulosic ethanol (ethanol made from garbage and wood as opposed to ethanol made from corn or sugar) in a commercially profitable manner. Defendants misrepresented the state of Xethanol's business operations and the state of the technology it possessed. They stated that Xethanol owned patents

and other technology from which it could manufacture ethanol from bio-mass in a profitable manner. They also stated that they were currently producing 6,000,000 gallons of ethanol a year which was not true.

11. The individual defendants made these representations to Lee Tyrol and other representatives of Global orally on many telephone calls and in innumerable meetings. Defendants also made the following representations in written documents including, but not limited to, the following:

a. In a brochure published in January 2005 entitled "Xethanol: Biomass to Biofuels" that Xethanol was producing 6,000,000 gallons of ethanol a year.

b. A press release dated September 16, 2005 in which Xethanol stated: "Xethanol Corporation seeks to become a leader in the emerging biomass-to-ethanol industry. Its mission is to convert biomass that is currently being abandoned or land filled into ethanol and other valuable co-products, such as xylitol. Xethanol's strategy is to deploy proprietary bio-technologies that will extract and ferment the sugars trapped in these biomass waste concentrations. Xethanol's goal is to produce ethanol and valuable co-products more cost effectively than corn-based processors with Xethanol plants located closer to biomass sources. In Iowa, Xethanol owns and operates two ethanol production facilities, where it is deploying these technologies."

c. In a Form 10KSB filed with the Securities and Exchange Commission on or about March 31, 2006, Xenathol described its plan of operation as follows: "Our expected revenue model is based on the sale of ethanol and a related co-product called xylitol. Xylitol is a natural sweetener that was approved by the FDA in the 1980's for use in foods and beverages, including chewing gums, candies, toothpastes and diabetic regimens. Xylitol is a co-product derived from biomass-to-ethanol production. At the present time, we own two ethanol plants in Iowa - Xethanol Bio-Fuels in Blairstown and Permeate Refining in Hopkinton. We also own several proprietary bio-extraction, bio-separation and bio-fermentation technologies that are targeted at reducing costs throughout the entire ethanol production process as well as enabling the conversion of biomass to ethanol and xylitol."

d. In a press release dated August 26, 2005, Xethanol reported that it had acquired the stock of Xylose Technologies, Inc.. The release quoted Christopher d'Arnaud Taylor as saying: "This is far more than a purchase of a milestone technology for lowering the cost of making ethanol from biomass. Rather, it is the pooling of Xethanol management with a world class scientific team headed by Dr. Jeffries that will continue to develop ways to make xylitol and ethanol more efficiently from biomass. This alliance with Dr. Jeffries and his team at the USDA Forest Products Lab will enable Xethanol to accelerate development and deployment

of its biomass technologies."

e. Defendants allowed Xethanol to be featured in the February 2006 issue of Fortune Small Business. D'Arnaud-Taylor represented that Xethanol had the technology to convert garbage into ethanol, stating "Xethanol isn't just relying on candy for its fuel supply. This year it plans to introduce a process that will make it possible to turn all kinds of things - including cornstalks, grass clippings, and old newspapers - into ethanol. . . . Xethanol will use a recently discovered form of yeast to ferment various types of garbage into ethanol. It has obtained rights to the process from the U. S. Department of Agriculture, where a scientist discovered that yeast in the intestines of a type of beetle can convert plant-based waste product into ethanol. This year d'Arnaud-Taylor intends to begin opening plants on the East Coast that will use yeast from the beetles to brew ethanol from sludge left over from paper milling. The plants will be able to make in total more than 100 million gallons a year."

12. The representations made by defendants to Tyrol and the other Global representatives were false and known by defendants to be false when they were made.

13. Defendants made their representations in order to induce plaintiff to rely on them.

14. Global relied on the representations of defendants to its detriment and, in reliance on their representations, invested

\$250,000 into New England Xethanol, a limited liability company formed by Global and by Xethanol to engage in the biomass to bio-fuels business.

15. As a result of the foregoing, plaintiffs were damaged in an amount exceeding \$10,000,000.

Wherefore, Global demands judgment a) compelling defendants to pay \$10,000,000 to Global, b) consequential damages, c) pre-judgment interest, d) costs of suit and e) such other relief as the Court may hold just and equitable.

DEMAND FOR JURY TRIAL

Plaintiff demands a trial by jury of all issues triable by jury.
